

What kind of company is Vietek, and what can it offer businesses?

Vietek supports businesses from consultation to delivery, based on how they actually work.

1 Company and role

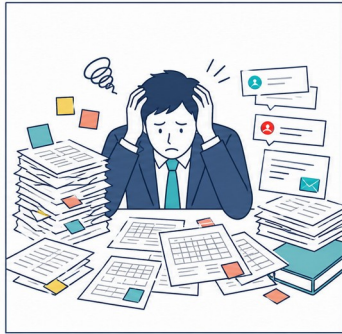

2 Representative

3 Available products

4 Project experience

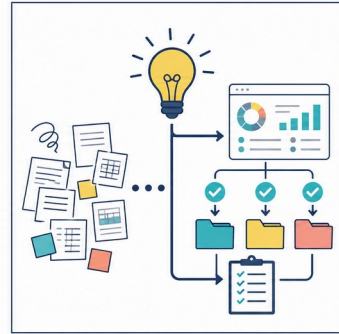

What business problems does Vietek solve?

Vietek understands your business and works with you from consultation and requirements through development and delivery.

1 Business challenges

Information is spread across paper, spreadsheets and messages
The same information is entered repeatedly
It is hard to see how work is progressing

2 What Vietek does

Review how you work together
Clarify problems and requirements
Build easy-to-use products, test and deliver them

3 What businesses receive

Products that fit their actual work
Information that is easier to bring together
Less manual work and easier tracking of results

Start with a small task, check the results and expand step by step.

We understand your work and handle completion and delivery personally.

Clarify problems, find solutions and build products for everyday work.

Experience

10+ years Software development	8 years Projects for Japan	Consultation to delivery Support throughout	AI and R&D AI for everyday work
--	--------------------------------------	---	---

Experience in projects for Japan, including travel, staffing and education.

Main strengths

- 01

Understanding your work
Review workflows and identify tasks that take time or are hard to manage.
- 02

Finding solutions
Clarify problems and propose improvements that fit your actual work.
- 03

Building usable products
Turn discussions into websites, apps and systems for everyday work.
- 04

Using AI at work
Research and develop ways to use AI to improve work and support people's tasks and decisions.

R&D: Automating parts of product development / AI to support shareholder meetings

Thang Tran

Representative / Product development lead

BSc in Computer Science | Personally responsible from consultation to delivery

From company websites to systems for everyday work.

Together, we identify what you need for your goals and work, then build a usable product.

01

Company and service websites

Company websites | Services | Recruitment | Campaigns

Websites that clearly present the strengths of your company and services.

Examples: company profile / inquiries / recruitment

02

Online services for customers

Bookings | Membership | Applications | Customer services

Customers can book, apply and use member features online.

Examples: online bookings / member pages / customer self-service

03

Smartphone apps

iPhone and Android | Bookings | Membership | Internal use

Easy to use on a smartphone while away from the office or on site.

Examples: mobile bookings / on-site data entry / customer apps

04

Internal business systems

Customers | Bookings | Stock | Requests and approvals | Sales and operations

Bring work managed in Excel, on paper or across multiple tools into one system.

Examples: less Excel / shared information / simpler entry and checks

05

Systems using AI

Document search and organization | Inquiries | Writing | Meetings and internal information

AI supports research, summaries, content creation and checks.

Examples: finding documents / answering inquiries / using internal information

You can consult us before deciding on a product format.

You can start with ideas such as making work easier, replacing Excel-based management or building a new service.

Educational document sharing service

Making educational documents easier to find and share.

A web service for users to upload, organize, search and share educational documents.

What this product can do

- 1 Upload documents
